

## PRESS INFORMATION

## Decoflame bioethanol fireplaces - by Attika

**Attika has acquired a stake in the Danish company Decoflame ApS as part of a strategic cooperation and will distribute the products in all Attika sales markets in future. With this decision, the Swiss manufacturer of high-quality wood and gas stoves and fireplaces is ideally complementing its existing product portfolio.**

For 16 years and with 25 employees, Decoflame has stood for the best quality, maximum product safety and stylish design. All products are developed and manufactured in the company's own production facility in Vestbjerg, Denmark. No product leaves the factory without quality control and test firing. In addition to numerous decorative models such as Espoo, Austin, Nice, etc., Decoflame also offers prefabricated 8 millimetre thick Montreal installation frames made of lightweight aluminium as well as the Denver F6 bioethanol burner in standard lengths from 620 millimetres to 3920 millimetres for individual installation. Decoflame offers a wide range of free-standing, prefabricated furniture in various materials for installation without structural modifications.

The fireplaces are operated on the appliance, by remote control or by smartphone. Many models also allow integration into a smart home system. The specially developed pump set guarantees extremely safe and easy refuelling of the fuel. Decoflame is also the right partner when it comes to customised and project-related special designs. Numerous reference projects all over the world with burner lengths of up to 6 metres are proof of Decoflame's innovative strength, professionalism and flexibility.

The installation of fireplaces generally requires only minor structural measures and no fireplace connection (exception CH: fireplace connection required from an output of 2 kW). Bioethanol is a CO<sub>2</sub>-neutral fuel without soot and fine dust. During combustion, bioethanol is converted into water and carbon dioxide and absorbed by plants as they grow.

In addition to the bioethanol fireplaces, Decoflame has developed a fascinating and reliable technology, the "Hybrid Mist" electric fire. Hybrid Mist uses a sophisticated combination of LED light and water vapour to create an authentic electric fire and supports a pleasant indoor climate.

All Decoflame and Attika fireplaces have one thing in common - they all spread cosiness and create a unique atmosphere.
