# Decoflame fireplaces

Danish quality and design since 2008

## Decoflame - your guarantee of good quality

The very first Decoflame bio fireplace was produced in 2008. The vision was to design and create bio fireplaces for the interior design-conscious customer, who wanted life and cosiness in the home.

The fireplaces are produced in Denmark at our location in North Jutland and with focus on sustainability, clean lines and good craftsmanship. We collaborate i.a. with other local companies. It is a conscious choice as our customers - and the environment - deserve focus on quality products.

The biofireplaces use bioethanol, which due to the low CO<sub>2</sub> emissions is environmentally friendly.

With great designs and a large selection of bio fireplaces, there are several options for both renovation and new construction projects, for private individuals - as well as companies where you can create beautiful, visionary solutions.

- »Danish craftsmanship and design
- »High quality and operational reliability
- »Equipped with safety features
- »No chimney or ventilation is required
- »Smoke, ash and soot free
- »Easy to install, operate and maintain
- »Uses environmentally friendly bioethanol  
(Min. 96.5% - max. 97.5%)

## Options

At Decoflame you will find a large selection of:

- »Electronic biofireplaces
- »Electronic hybrid mist fireplaces
- »Manual biofireplaces
- »Built-in biofireplaces
- »Wall-mounted biofireplaces
- »Outdoor biofireplaces
- »Floor and table biofireplaces
- »Ceiling-mounted biofireplaces

## Danish design - Danish craftsmanship

Decoflame designs and produces locally. The craftsmanship and the good quality are important to us - and our customers.

## The electronic fireplaces

In addition to the manual burner, there are 2 electronic burners: Denver e-Ribbon and Denver e-Ribbon Basic. These 2 models can i.a. be controlled via App.

## Decoflame App

- »Regulate the flame intensity
- »Check fuel consumption
- »Check remaining burning time
- »Check remaining fuel level
- »Switch the fireplace on and off
- »Set automatic switch off " timer "

## NEW - Hybrid Mist Fireplace

This model has been developed with a technology that atomises the water vapours.

The mist can be controlled electronically and lit up by the built-in LED lights, which gives the illusion of real flames.

The water needed for this fireplace is demineralised water.

The Hybrid Mist Fireplace can be integrated in many casings e.g. Montreal and Orlando.

### 3 sizes:

- » 720 burner // 6 L // Up to 48 hours // 125 ml /h
- » 920 burner // 8 L // Up to 53 hours // 150 ml /h
